

## e-lectroloc Barrel Lock and Key System

Solid & Sealed Face –  
Eliminates contaminants from  
entering the lock

### Description

The e-lectroloc is an intelligent/smart barrel lock & key system that eliminates all the inherent problems with traditional barrel lock & key systems used by utilities today. Both barrel locks and keys are feature rich and programmable. This system could very well be the last barrel lock and key system installed at a utility.

Keys are programmed to time out on a specific day and will not function or open locks until authorized utility personnel reprogram the key. This feature ensures that after the timeout period expires, the barrel lock and key system will not be compromised (used without permission) even if keys are lost or stolen. Key control concerns are now a thing of the past. In addition to the time out feature, the key can be programmed to operate a specific lock code or as a supervisor that can operate multiple lock codes.

The key design includes a collet or metal collar that secures the barrel lock to the key, allowing one hand installation of the barrel lock. Incorporated in the key design are a rechargeable 3.7V battery and a button with LED confirmation that the key unlocked the barrel lock correctly.

The face of the e-lectroloc is solid and sealed therefore dirt, sand, and water cannot enter the lock mechanism. This also prevents disgruntled consumers or vandals from inserting foreign objects into the lock mechanism. The barrel lock can be reprogrammed by the factory to a new lock code if necessary. The lock is constructed of all stainless steel so corrosion is never an issue.

### Feature / Benefits

#### Smart Key Features -

- ◆ Programmable Key Expiration (Stops working after a preset time)
- ◆ Rugged Design stands up to Frequent Use
- ◆ Holds Barrel Lock for One Handed Installation
- ◆ Ease of Operation
- ◆ Rechargeable Battery

#### Smart Lock Features -

- ◆ No Keyway Opening in Barrel Lock
  - ◆ Prevents Water or Dirt contamination
  - ◆ Prevents Mud Dauber or Insect Infestation
  - ◆ Prevents Objects from Being Inserted
  - ◆ Eliminates Key Breakage Inherent with Traditional Keys
- ◆ All Stainless Steel Components Prevents Rust
- ◆ Programmable Lock Code
